SUBJECT: Duane Marine Salvage Corp.

Dear Sir:

As of March 29, 1985, we have taken forty-two samples of tankers, drums, and vats on the Duane Marine properties.

After reviewing the site, we have estimated from the present information that the following amounts of materials in solids, liquids, and semi-solids are as follows:

1. 660 yards solids - burnt drums, dumpsters, tank bottoms, and visible soil contamination.
2. 38,000 gallons - liquid bulk from vats, tanks and drums.
3. 2,100 gallons semi-solid material from tanks and drums.

These estimates are with the exception of approximately 165 drums yet to be opened. Unknown amounts of soil contamination due to migrating of wastes in ground and results of testing samples.

A final estimate of count on site will be issued at end of sampling period.

Very truly yours,
IT CORPORATION

John W. Sterling
Site Superintendent
